ENGINEERED TIMBER PRODUCTS

# DeckSTAR™

ENGINEERED TIMBER PRODUCTS

## GLUE:

The glue manufacturer is Akzo Nobel and the glue is a phenol resorcinol glue used for boat manufacturing and bridge building.

Comprehensive data sheets are available on request.

## OIL:

The oil is a teak oil based on special air-drying oil solvents. It is transparent and pastel in colour. It is a "PRE-OIL", specifically manufactured for DeckSTAR® products.

It is designed as an under-coat only, so whilst this will give initial protection, your DeckSTAR® product will weather quickly if a further coat is not applied. If you do not want your product to weather, we strongly recommend re-oiling. You can apply any oil-based product at any time.

Please see your stockist for a suitable product.

## QUALITY CONTROL

DeckSTAR® products have been designed and manufactured to a unique quality control system.

We call this "DeckSTAR® QC".

We have technicians based on factory site, performing routine checks to ensure this strict system is stringently followed.

As part of "DeckSTAR®", and to ensure the product is suitable for Australian conditions, various samples are: Boiled, Frozen and Micro-waved. This ensures product is "fit for purpose".
